San Juan Timberframes Makes Your Dream Home a Reality.

High soaring ceilings, douglas fir timbers and precise dovetail and oak pegged mortise and tenon joinery are the hallmarks of our timberframe homes. Each timberframe is a custom design. Choose from any number of styles: national park lodge, craftsman bungalow, woody cabin, farmhouse or ultra modern. We work from your existing plans or in close collaboration with your architect or designer to create a home that is beautiful, functional, affordable, and built to last.

Surprisingly Affordable, There's No Need to Sacrifice.

A San Juan Timberframes home is filled with detail that sets you apart from the rest. It creates unmatched warmth and drama at a cost that is comparable to a custom built conventional home. Our fast design services and quick build system can often shorten your construction time by one to three months or more. The long term savings and resale value can exceed that of traditional construction..

Duty Free Canadian Quality.

We lower the cost of your timberframe home further by packaging it with other high quality Canadian building products that offer excellent value. Our typical whole house package includes the timberframe, structural insulated panels (SIPs), high-end doors and windows, siding, paneling and lumber needed to finish your home.

The first step to your beautiful home is simple. Let us transform your plans or design into a timberframe dream home. In most cases we are able to provide this preliminary design and quote free of charge.

Super Energy Efficient - saving you up to 50% of your heating costs for life.

Our timberframes usually encompass the use of structural insulated panels (SIPs), one of the most energy efficient, quick and dependable building systems available. San Juan Timberframes is proud to be a partner in the US government's ENERGY STAR® program and to provide homes that consistently exceed the their stringent standards.
